ELSEVIER

Comput. Methods Appl. Mech. Engrg. 153 (1998) 309–310

Computer methods in applied mechanics and engineering

Contents Volume 153

Volume 153, Nos. 1–2, 28 January 1998

A comparative study of different sets of variables for solving compressible and incompressible flows
G. Hauke and T.J.R. Hughes 1

Variational analysis of a mixed element/volume scheme with fourth-order viscosity on general triangulations
K. Mer 45

A contact finite element formulation for biological soft hydrated tissues
P.S. Donzelli and R.L. Spilker 63

Boundary integration of polynomials over an arbitrary linear tetrahedron in Euclidean three-dimensional space
H.T. Rathod and S.V. Hiremath 81

Reflection characteristics of torsional waves in transversely isotropic stepped bars
K. Liu, S. Xie and H. Sun 107

A new cloud-based *hp* finite element method
J.T. Oden, C.A.M. Duarte and O.C. Zienkiewicz 117

Formulation of elastostatic hybrid-Trefftz stress elements
J.A. Teixeira de Freitas 127

Volume 153, Nos. 3–4, 30 January 1998

Computational algorithm for controlling a Timoshenko beam
M. Tadi 153

Boundary-hybrid finite elements and a posteriori error estimation
J.M. Maubach and P.J. Rabier 167

Comparison of applicability of various thermo-viscoplastic constitutive models in modelling of welding
J. Ronda and G.J. Oliver 195

Characterization of the mechanical behaviors of solid–fluid mixture by the homogenization method
K. Terada, T. Ito and N. Kikuchi 223

Modeling crystallographic texture evolution with finite elements over neo-Euclidean orientation spaces
A. Kumar and P.R. Dawson 259
